

Calcuemus! — Progress in Universal Logic Reasoning and Computational Metaphysics

Christoph Benz Müller

University of Luxembourg | Freie Universität Berlin | Saarland University

Presentation Structure

A Logic Zoo

B Universal Logic Reasoning in HOL

C Computational Metaphysics

D Conclusion

E Research and Teaching Profile

Part A

Logic Zoo

“If we had it [*a characteristica universalis*], we should be able to reason in metaphysics and morals in much the same way as in geometry and analysis.”

(Leibniz, 1677)

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic
- ...
- n. Higher-order Logic

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

(A) Logic Zoo

Classical Logic, of order

0. Propositional Logic
1. First-order Logic
2. Second-order Logic
- ...
- n. Higher-order Logic

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Example Application in Maths:

- ▶ Pythagorean Triples Problem solved by SAT-Solving in 2016

(A) Logic Zoo

Classical Logic, of order

0. Propositional Logic

1. **First-order Logic**

2. Second-order Logic

...

n. Higher-order Logic

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Example Applications in Maths:

- ▶ First-order Set Theories: ZF, ZFC, ...

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic
- ...
- n. **Higher-order Logic**

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Example Applications in Maths:

- ▶ Four-Colour Theorem: Formal verification by Gonthier in 2005 (Coq)
- ▶ Kepler's Conjecture: Formal verification by Hales in 2014 (HOL-light)

Kepler (1571-1630)

The most compact way of stacking balls of the same size in space is a pyramid.

$$V_- = \frac{\pi}{\sqrt{18}} \approx 74\%$$

- ▶ Proved in 1998 by Hales: 300 page proof, with code and data
- ▶ Submitted to the Annals of Mathematics: referees gave up to verify it all
- ▶ **Flyspeck project (completed in 2014):**
 - ▶ A formal verification of the proof in HOL Light
 - ▶ 27,223 proved theorems, 228 definitions, **30 person-years**
- ▶ **Recent work of Cezary Kalyszczak & Josef Urban:**
Combination of **Machine Learning & Automated Theorem Proving**
Result: **more than 50% of the proofs can already be fully automated**

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic
- ...
- n. **Higher-order Logic**

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Own Research: Utilise Higher-order Logic (HOL) as Meta-Logic

This turns

- ▶ HOL into a (quite) universal logic
- ▶ HOL provers into (quite) universal reasoners

Applications in Maths, CS, AI, Philosophy, Computational Linguistics, ...

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic
- ...
- n. **Higher-order Logic**

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Higher-order Logic: Don't be afraid of it!

Paradoxes (e.g. Russel's Paradox)
Incompleteness

eliminated by **Types**
avoided by **Henkin Semantics**

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic
- ...
- n. Higher-order Logic

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logis, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Example Application in Metaphysics/Philosophy:

Rest of this talk!

Necessarily, God exists:

$$\Box \exists x.Gx$$

Kurt Gödel's definition of God:

$$Gx := \forall \Phi. \text{Positive } \Phi \rightarrow \Phi x$$

(A) Logic Zoo

Classical Logic, of order

- 0. Propositional Logic
- 1. First-order Logic
- 2. Second-order Logic

...

- n. Higher-order Logic

Non-Classical Logics

- ▶ Intuitionistic/Constructive Logics (incl. Univalent Foundations)
- ▶ Modal Logics, Conditional Logics, Temporal Logics, Spatial Logics
- ▶ Many-valued Logics
- ▶ Paraconsistent Logics
- ▶ Free Logics, Inclusive Logics
- ▶ Logics for special applications: Ethics, Social Choice, Legal Reasoning, ...
- ▶ ...

Example Application in Maths: (own jww with Dana Scott)

- ▶ Free Logics are well suited for modeling **undefinedness and partiality**
- ▶ **Flaw detected in category theory textbook** by Freyd and Scedrov (1990)

(A) Logic Zoo: Theory Exploration in Category Theory — Free First-order Logic —

1.1. BASIC DEFINITIONS

The theory of CATEGORIES is given by two unary operations and a binary partial operation. In most contexts lower-case variables are used for the 'individuals' which are called *morphisms* or *maps*. The values of the operations are denoted and pronounced as:

$\square x$ the source of x ,

$x\square$ the target of x ,

xy the composition of x and y .

The axioms:

A1 xy is defined iff $x\square = \square y$,

A2a $(\square x)\square = \square x$ and $\square(x\square) = x\square$, A2b

A3a $(\square x)x = x$ and $x(x\square) = x$, A3b

A4 $\square(xy) = \square(x(\square y))$ and $(xy)\square = ((x\square)y)\square$, A4b

A5 $x(yz) = (xy)z$.

- ▶ Joint work with: Dana Scott (Berkeley) and students at FU Berlin
- ▶ Logics: **Free Logic** — well suited for modeling undefinedness and partiality
- ▶ **Results:**
 - ▶ development of 6 related (equivalent) axiom systems for category theory
 - ▶ from Monoids ... via Scott's (1977) axiom system ... to Freyd/Scedrov (1990)
 - ▶ **for Freyd and Scedrov (1990) we revealed some flaws/issues**
- ▶ Further Reading: [Benzmüller&Scott, ICMS'2016], [Benzmüller&Scott, arXiv'2016]

(A) Logic Zoo: Theory Exploration in Category Theory — Free First-order Logic —

“Constricted Inconsistency” or “Missing Axioms/Conditions”

1.1. BASIC DEFINITIONS

The theory of CATEGORIES is given by two unary operations and a binary partial operation. In most contexts lower-case variables are used for the ‘individuals’ which are called *morphisms* or *maps*. The values of the operations are denoted and pronounced as:

$\Box x$ the source of x ,

The axioms:

A1 xy is defined iff $x\Box = \Box y$,

A2a $(\Box x)\Box = \Box x$ and $\Box(x\Box) = x\Box$, A2b

A3a $(\Box x)x = x$ and $x(x\Box) = x$, A3b

A4 $\Box(xy) = \Box(x(\Box y))$ and $(xy)\Box = ((x\Box)y)\Box$, A4b

A5 $x(yz) = (xy)z$.

- ▶ Joint work with: Dana Scott (Berkeley) and students at FU Berlin
- ▶ Logics: **Free Logic** — well suited for modeling undefinedness and partiality
- ▶ **Results:**
 - ▶ development of 6 related (equivalent) axiom systems for category theory
 - ▶ from Monoids ... via Scott's (1977) axiom system ... to Freyd/Scedrov (1990)
 - ▶ **for Freyd and Scedrov (1990) we revealed some flaws/issues**
- ▶ Further Reading: [Benzmüller&Scott, ICMS'2016], [Benzmüller&Scott, arXiv'2016]

Part B

Universal Logic Reasoning in HOL via Shallow Semantical Embeddings

jww:

Larry Paulson (Cambridge, UK), Bruno Woltzenlogel-Paleo (ANU, Australia),
Alex Steen and Max Wisniewski (both FU Berlin)

(B) Universal Logic Reasoning in HOL

Examples for **L** we have already studied:

Modal Logics, Description Logics, Conditional Logics, Intuitionistic Logics, Access Control Logics, Nominal Logics, Multivalued Logics (SIXTEEN), Logics based on Neighborhood Semantics, (Mathematical) Fuzzy Logics, Paraconsistent Logics, Free Logic ...

Embedding works also for quantifiers (first-order & higher-order)

HOL provers become universal logic reasoning engines!

interactive: Isabelle/HOL, PVS, HOL4, Hol Light, Coq/HOL, ...

automated: TPS, LEO-II, Satallax, Nitpick, Isabelle/HOL, ...

(B) Universal Logic Reasoning in HOL

Examples for **L** we have already studied:

Modal Logics, Description Logics, Conditional Logics, Intuitionistic Logics, Access Control Logics, Nominal Logics, Multivalued Logics (SIXTEEN), Logics based on Neighborhood Semantics, (Mathematical) Fuzzy Logics, Paraconsistent Logics, Free Logic . . .

Embedding works also for quantifiers (first-order & higher-order)

HOL provers become universal logic reasoning engines!

interactive: Isabelle/HOL, PVS, HOL4, Hol Light, Coq/HOL, . . .

automated: TPS, LEO-II, Satallax, Nitpick, Isabelle/HOL, . . .

(B) Universal Logic Reasoning in HOL

automated: TPS, LEO-II, Satallax, Nitpick, Isabelle/HOL, . . .

(B) Universal Logic Reasoning in HOL

HOL (meta-logic)

$\varphi ::=$ 

L (object-logic)

$\psi ::=$ 

Embedding of  in 

 = 
 = 
 = 
 = 
 = 

Pass this set of equations to a HOL theorem prover

(B) Universal Logic Reasoning in HOL

HOL $s, t ::= \mathbf{c}_\alpha \mid x_\alpha \mid (\lambda x_\alpha s_\beta)_{\alpha \rightarrow \beta} \mid (s_{\alpha \rightarrow \beta} t_\alpha)_\beta \mid \neg s_o \mid s_o \vee t_o \mid \forall x_\alpha t_o$

HOML $\varphi, \psi ::= \dots \mid \neg \varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box \varphi \mid \Diamond \varphi \mid \forall x_\gamma \varphi \mid \exists x_\gamma \varphi$

HOML in **HOL**: **HOML** formulas φ are mapped to **HOL** predicates $\varphi_{\mu \rightarrow o}$
(explicit representation of labelled formulas)

$\neg$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \neg \varphi w$
$\wedge$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda \psi_{\mu \rightarrow o} \lambda w_\mu (\varphi w \wedge \psi w)$
$\rightarrow$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda \psi_{\mu \rightarrow o} \lambda w_\mu (\neg \varphi w \vee \psi w)$
$\forall$	$=$	$\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \forall d_\gamma h d w$
$\exists$	$=$	$\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w$
$\Box$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \forall u_\mu (\neg r w u \vee \varphi u)$
$\Diamond$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \exists u_\mu (r w u \wedge \varphi u)$
valid	$=$	$\lambda \varphi_{\mu \rightarrow o} \forall w_\mu \varphi w$

Ax (polymorphic over γ)

The equations in **Ax** are given as axioms to the **HOL** provers!

(B) Universal Logic Reasoning in HOL

HOL $s, t ::= c_\alpha \mid x_\alpha \mid (\lambda x_\alpha s_\beta)_{\alpha \rightarrow \beta} \mid (s_{\alpha \rightarrow \beta} t_\alpha)_\beta \mid \neg s_o \mid s_o \vee t_o \mid \forall x_\alpha t_o$

HOML $\varphi, \psi ::= \dots \mid \neg \varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box \varphi \mid \Diamond \varphi \mid \forall x_\gamma \varphi \mid \exists x_\gamma \varphi$

HOML in **HOL**: **HOML** formulas φ are mapped to **HOL** predicates $\varphi_{\mu \rightarrow o}$
(explicit representation of labelled formulas)

$\neg$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \neg \varphi w$
$\wedge$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda \psi_{\mu \rightarrow o} \lambda w_\mu (\varphi w \wedge \psi w)$
$\rightarrow$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda \psi_{\mu \rightarrow o} \lambda w_\mu (\neg \varphi w \vee \psi w)$
$\forall$	$=$	$\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \forall d_\gamma h d w$
$\exists$	$=$	$\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w$
$\Box$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \forall u_\mu (\neg r w u \vee \varphi u)$
$\Diamond$	$=$	$\lambda \varphi_{\mu \rightarrow o} \lambda w_\mu \exists u_\mu (r w u \wedge \varphi u)$
valid	$=$	$\lambda \varphi_{\mu \rightarrow o} \forall w_\mu \varphi w$

Ax (polymorphic over γ)

The equations in **Ax** are given as axioms to the **HOL** provers!

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in **HOL**

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_{\mu} \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_{\mu} ((\Diamond \exists x Gx) w)$

expansion

$\forall w_{\mu} (((\lambda \varphi \lambda w_{\mu} \exists u_{\mu} (rwu \wedge \varphi u)) \Diamond \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_{\mu} \exists u_{\mu} (rwu \wedge (\Diamond \exists x Gx) u)$

syntactic sugar

$\forall w_{\mu} \exists u_{\mu} (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_{\mu} \exists u_{\mu} (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_{\mu} \exists d_{\gamma} h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_{\mu} \exists u_{\mu} (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in **HOML**,
→ we instead prove that **valid** φ can be derived from Ax in **HOL**.

This can be done with interactive or automated **HOL** theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \Diamond \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\Diamond \exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gxu)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h \gamma \rightarrow (\mu \rightarrow o) \lambda w_\mu \exists d_\gamma h d w) (\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\Diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\Diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\Diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\Diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w)(\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

In order to prove that φ is valid in HOML,
→ we instead prove that valid φ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

(B) Universal Logic Reasoning in HOL

Example

HOML formula

$\diamond \exists x Gx$

HOML formula embedded in HOL

valid $(\diamond \exists x Gx)$

expansion

$(\lambda \varphi \forall w_\mu \varphi w)(\diamond \exists x Gx)$

$\beta\eta$ -normalisation

$\forall w_\mu ((\diamond \exists x Gx) w)$

expansion

$\forall w_\mu (((\lambda \varphi \lambda w_\mu \exists u_\mu (rwu \wedge \varphi u)) \exists x Gx) w)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x Gx) u)$

syntactic sugar

$\forall w_\mu \exists u_\mu (rwu \wedge (\exists (\lambda x Gx)) u)$

expansion

$\forall w_\mu \exists u_\mu (rwu \wedge ((\lambda h_{\gamma \rightarrow (\mu \rightarrow o)} \lambda w_\mu \exists d_\gamma h d w)(\lambda x Gx)) u)$

$\beta\eta$ -normalisation

$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gx u)$

What are we doing?

(B) Universal Logic Reasoning in HOL

Which modal logic?

Which notion of quantification?

- ▶ possibilist quantifiers — constant domain semantics
- ▶ actualist quantifiers — varying domain semantics

“If we had it [a *characteristica universalis*], we should be able to reason in metaphysics and morals in much the same way as in geometry and analysis.”

(Leibniz, 1677)

Gödel

(C) Computational Metaphysics: Kurt Gödel's Ontological Argument

Ontologischer Beweis

Feb 10, 1970

P(φ) φ is positive ($\varphi \in P$)

At 1 $P(\varphi) \cdot P(\psi) \supset P(\varphi \wedge \psi)$ At 2 $P(\varphi) \supset P(\Box \varphi)$

P1 $G(x) \equiv (\varphi) [P(\varphi) \supset \varphi(x)]$ (God)

P2 $\varphi \text{ Ess } x \equiv (\psi) [\psi(x) \supset N(y)[\varphi(y) \supset \psi(y)]]$ (Essence of x)

$P \supset Nq = N(p \supset q)$ Necessity

At 2 $P(\varphi) \supset NP(\varphi)$
 $\sim P(\varphi) \supset N \sim P(\varphi)$ } because it follows from the nature of the property

Th. $G(x) \supset G \text{ Ess } x$

Df. $E(x) \equiv (\varphi) [\varphi \text{ Ess } x \supset N \exists x \varphi(x)]$ necessary Existence

Ax 3 $P(E)$

Th. $G(x) \supset N(\exists y) G(y)$

hence $(\exists x) G(x) \supset N(\exists y) G(y)$

" $M(\exists x) G(x) \supset MN(\exists y) G(y)$

" $\supset N(\exists y) G(y)$

M = possibility

any two sentences of x are nec. equivalent

exclusive or * and for any number of humanists

$M(\exists x) G(x)$ means ^{the system is} all pos. props. is. com-
 putable This is true because of:

At 4 $P(\varphi) \cdot \varphi \supset_N \psi \supset P(\psi)$ which implies

~~then~~ $\begin{cases} x=x & \text{is positive} \\ x \neq x & \text{is negative} \end{cases}$

But if a system S of pos. props. were inconsistent it would mean that the prop. S (which is positive) would be $x \neq x$

Positive means positive in the modal aesthetic sense (independently of the accidental structure of the world). Only when the attr. time. It also means "attribution" as opposed to "privation" (or containing privation). This interprets the proof

of φ privation: $(x) N \sim \varphi(x) \supset \text{Essence } \varphi(x) \supset N x \neq$

hence $x \neq x$ positive iff $x=x$ is necessary At

or the exp. of pos. attr.

x i.e. the formal form in terms of elem. prop. contains a memba without negation.

(C) Computational Metaphysics: Scott's Variant of Gödel's Ontological Argument

Axiom A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive:
 $\forall\phi\forall\psi[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall\phi[P(\phi) \rightarrow \Diamond\exists x\phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\Diamond\exists xG(x)$

Axiom A4 Positive properties are necessarily positive: $\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An essence of an individual is a property possessed by it and necessarily implying any of its properties:
 $\phi \text{ ess. } x \leftrightarrow \phi(x) \wedge \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

Thm. T2 Being God-like is an essence of any God-like being: $\forall x[G(x) \rightarrow G \text{ ess. } x]$

Def. D3 Necessary existence of an individual is the necessary exemplification of all its essences:
 $NE(x) \leftrightarrow \forall\phi[\phi \text{ ess. } x \rightarrow \Box\exists y\phi(y)]$

Axiom A5 Necessary existence is a positive property: $P(NE)$

Thm. T3 Necessarily, God exists: $\Box\exists xG(x)$

(C) Computational Metaphysics: Scott's Variant of Gödel's Ontological Argument

Axiom A1 Either a property or its negation is positive, but not both: $\forall \phi [P(\neg \phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive:
 $\forall \phi \forall \psi [(P(\phi) \wedge \Box \forall x [\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall \phi [P(\phi) \rightarrow \Diamond \exists x \phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall \phi [P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\Diamond \exists x G(x)$

Axiom A4 Positive properties are necessarily positive: $\forall \phi [P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An essence of an individual is a property possessed by it and necessarily implying any of its properties:
 $\phi \text{ ess. } x \leftrightarrow \phi(x) \wedge \forall \psi (\psi(x) \rightarrow \Box \forall y (\phi(y) \rightarrow \psi(y)))$

second-order quantifiers

(C) Computational Metaphysics: Vision of Leibniz (1646–1716) — *Calculemus!*

Quo facto, quando orientur controversiae, non magis disputatione opus erit inter duos philosophos, quam inter duos Computistas. Sufficiet enim calamos in manus sumere sedereque ad abacos, et sibi mutuo . . . dicere: calculemus. (Leibniz, 1684)

If controversies were to arise, there would be no more need of disputation between two philosophers than between two accountants. For it would suffice to take their pencils in their hands, to sit down to their slates, and to say to each other . . . : Let us calculate.

(Translation by Russell)

The screenshot shows a proof assistant interface with a file named `GodProof.thy` open. The file path is `~/chris/trunk/tex/talks/2016-Dagstuhl/`. The interface includes a toolbar at the top, a sidebar on the right with tabs for `Documentation`, `Sledgehammer`, `State`, and `Theories`, and a bottom status bar.

The main text area contains the following code:

```
115 definition ess (infixr "ess" 85) where
116   "Φ ess x = Φ(x) ∧ (∀PΨ. Ψ(x) → □(∀yy. Φ(y) → Ψ(y)))"
117
118 (* T2: Being God-like is an essence of any God-like being *)
119 theorem T2: "[∀xx. G(x) → G ess x]" by (smt A1b A4 G_def ess_def)
120
121 (* NE: Necessary existence of an individual is the necessary
122    exemplification of all its essences *)
123 definition NE where "NE(x) = (∀PΦ. Φ ess x → □(∃xx. Φ(x)))"
124
125 (* A5: Necessary existence is a positive property *)
126 axiomatization where A5: "[P(NE)]"
127
128 (* T3: Necessarily, God exists *)
129 theorem T3: "[□(∃xx. G(x))]" by (metis A5 C T2 G_def NE_def S5)
130
131
132 (* Consistency is confirmed by Nitpick *)
133 lemma True nitpick [satisfy, user_axioms] oops
134
```

Below the code, there are checkboxes for `Proof state` and `Auto update`, an `Update` button, a `Search:` field, and a `100%` zoom level. The `proof` block is visible:

```
proof (prove)
  goal (1 subgoal):
    1. [(λw. [S5 w → mexi_prop G])]

```

The bottom status bar shows the file path `129,27 (4671/4977)`, the encoding `(isabelle,isabelle,UTF-8-Isabelle)`, the user `Nm r o UG`, the version `358/60`, and the time `OMB 11:54 AM`.

Automation of Scott's Variant

Summary

- ▶ Proof verified and automated
- ▶ Logic **KB** is sufficient (the often criticised **S5 not needed!**)
- ▶ Possibilist & actualist quantification (for ind.)
- ▶ Exact dependencies determined
- ▶ Theorem provers found **alternative Proofs**
e.g. self-identity $\lambda x(x = x)$ not needed

(C) Computational Metaphysics: Avoiding the Modal Collapse

SOME EMENDATIONS OF GÖDEL'S ONTOLOGICAL PROOF

C. Anthony Anderson

Kurt Gödel's version of the ontological argument was shown by J. Howard Sobel to be defective, but some plausible modifications in the argument result in a version which is immune to Sobel's objection. A definition is suggested which permits the proof of some of Gödel's axioms.

Der Mathematiker und die Frage der Existenz Gottes (betreffend Gödels ontologischen Beweis)

Es ist gut, daß wir nicht wissen,
sondern glauben, daß ein Gott ist.
(Kant, Vorlesung)

1. Einführung

Gödel zu Lebzeiten unveröffentlichter Beweis für die notwendige Existenz eines Gott-ähnlichen Wesens hat sowohl philosophisches als auch mathematisches Interesse geweckt. Zweck der vorliegenden Arbeit ist es, zu einer Deutung des Gödel'schen Textes beizutragen, 1. durch Kommentierung der einschlägigen Literatur und 2. durch Bereitstellung von etwas Modelltheorie. Die Arbeit enthält keinen philosophischen Beitrag. Während der letzten Jahre habe ich etliche Male über Gödel's Gottesbeweis vorgetragen, insbesondere auf dem Symposium zur Feier von Professor Gerit Müller (Heidelberg, Jänner 1991), doch habe ich niemals beabsichtigt, eine Veröffentlichung über das Thema zu machen. Da ich wiederholt um eine schriftliche Version gebeten wurde, entschloß ich mich, schnell eine „erweiterte Kurzfassung“¹ zu schreiben, ohne aus ihr einen

Gödel's Ontological Proof Revisited *

C. Anthony Anderson and Michael Gettings
University of California, Santa Barbara
Department of Philosophy

Gödel's version of the modal ontological argument for the existence of God has been criticized by J. Howard Sobel [5] and modified by C. Anthony Anderson [1]. In the present paper we consider the extent to which Anderson's emendation is defeated by the type of objection first offered by the Monk Gaunilo to St. Anselm's original Ontological Argument. And we try to push the analysis of this Gödelian argument a bit further to bring it into closer agreement with the details of Gödel's own formulation. Finally, we indicate what seems to be the main weakness of this emendation of Gödel's attempted proof.

PETR HÁJEK

A New Small Emendation of Gödel's Ontological Proof

Keywords: Ontological proof, Gödel, modal logic, comprehension, positive properties.

1. Introduction

Gödel's ontological proof of necessary existence of a godlike being was finally published in the third volume of Gödel's collected works [7]; but it became known in 1970 when Gödel showed the proof to Dana Scott and Scott presented it (in fact a variant of it) at a seminar at Princeton. Detailed history is found in Adams' introductory remarks to the ontological proof in [7]. The proof uses modal logic and its analysis is an exciting exercise in systems of formal modal logic. Needless to say, formal modal logic has found several

Magari and others on Gödel's ontological proof

Petr Hájek
Institute of Computer Science, Academy of Sciences
182 07 Prague, Czech Republic
e-mail: hajek@uivt.cas.cz

1 Introduction

This paper is a continuation of my paper [H] and concentrates almost exclusively to mathematical properties of logical systems underlying Gödel's ontological proof [G] and its variant by Anderson [A], with special care paid to Magari's criticism [M]. Since [H] is written in German, we shall try to summarize its content in such a way that knowledge of [H] will be not obligatory for reading the present paper (even it remains advantageous). Here we describe

Understanding Gödel's Ontological Argument

FRODE BJØRDAL

In 1970 Kurt Gödel, in a hand-written note entitled "Ontologischer Beweis", put forward an ontological argument for the existence of God, making use of second-order modal logical principles. Let the second-order formula $P(F)$ stand for "the property F is positive", and let "God" signify the property of being God-like. Gödel presupposes the following definitions:

Leibniz (1646–1716)

characteristica universalis and calculus ratiocinator

If controversies were to arise, there would be no more need of disputation between two philosophers than between two accountants. For it would suffice to take their pencils in their hands, to sit down to their slates, and to say to each other . . . : Let us calculate.

But: Intuitive proofs/models are needed to convince philosophers

Rational Reconstruction of the Inconsistency of Gödel's Axioms

[Benzmüller&WoltzenlogelPaleo, IJCAI-2016]

(C) Computational Metaphysics: Rational Reconstruction of Inconsistency

Axiom A1 Either a property or its negation is positive, but not both: $\forall \phi [P(\neg \phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive:
 $\forall \phi \forall \psi [(P(\phi) \wedge \Box \forall x [\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall \phi [P(\phi) \rightarrow \Diamond \exists x \phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall \phi [P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\Diamond \exists x G(x)$

Axiom A4 Positive properties are necessarily positive: $\forall \phi [P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An essence of an individual is a property possessed by it and necessarily implying any of its properties:
 $\phi \text{ ess. } x \leftrightarrow \phi(x) \wedge \forall \psi (\psi(x) \rightarrow \Box \forall y (\phi(y) \rightarrow \psi(y)))$

Thm. T2 Being God-like is an essence of any God-like being: $\forall x [G(x) \rightarrow G \text{ ess. } x]$

Def. D3 Necessary existence of an individual is the necessary exemplification of all its essences:
 $NE(x) \leftrightarrow \forall \phi [\phi \text{ ess. } x \rightarrow \Box \exists y \phi(y)]$

Axiom A5 Necessary existence is a positive property: $P(NE)$

Thm. T3 Necessarily, God exists: $\Box \exists x G(x)$

Difference to Gödel (who omits this conjunct)

(C) Computational Metaphysics: Rational Reconstruction of Inconsistency

[BenzmüllerWoltzenlogelPaleo, IJCAI, 2016]

Def. D2*

$$\phi \text{ ess. } x \leftrightarrow \cancel{\phi(x)} \wedge \forall \psi (\psi(x) \rightarrow \Box \forall y (\phi(y) \rightarrow \psi(y)))$$

Lemma 1

The empty property is an essence of every entity. $\forall x (\emptyset \text{ ess. } x)$

Theorem 1 Positive Properties are possibly exemplified. $\forall \phi [P(\phi) \rightarrow \Diamond \exists x \phi(x)]$

Axiom A5

$$P(NE)$$

► by T1, A5:

$$\Diamond \exists x [NE(x)]$$

Def. D3

$$NE(x) \leftrightarrow \forall \phi [\phi \text{ ess. } x \rightarrow \Box \exists y \phi(y)]$$

► by D3

$$\Diamond \exists x [\forall \phi [\phi \text{ ess. } x \rightarrow \Box \exists y [\phi(y)]]]$$

►

$$\Diamond \exists x [\emptyset \text{ ess. } x \rightarrow \Box \exists y [\emptyset(y)]]$$

► by Lemma 1

$$\Diamond \exists x [\top \rightarrow \Box \exists y [\emptyset(y)]]$$

► by def. of $\emptyset$

$$\Diamond \exists x [\top \rightarrow \Box \perp]$$

►

$$\Diamond \exists x [\Box \perp]$$

►

$$\Diamond \Box \perp$$

Inconsistency

$$\perp$$

(C) Computational Metaphysics: Gödel's Manuscript — Inconsistent Axioms

Ontologischer Beweis

Feb 10, 1970

$P(\varphi)$ φ is positive ($\varphi \in P$)

At 1 $P(\varphi) \cdot P(\psi) \supset P(\varphi \cdot \psi)$ At 2 $P(\varphi) \supset P(\sim \varphi)$

P1 $G(x) \equiv (\varphi) [P(\varphi) \supset \varphi(x)]$ (God)

P2 $\varphi \text{ En } x \equiv (\psi) [\psi(x) \supset N(y)[\varphi(y) \supset \psi(y)]]$ (Ennough/x)

$P \supset Nq = N(p \supset q)$ Necessity

At 2 $P(\varphi) \supset NP(\varphi)$
 $\sim P(\varphi) \supset N \sim P(\varphi)$ } because it follows from the nature of the property

Th. $G(x) \supset G \text{ En } x$

Df. $E(x) \equiv (\varphi) [\varphi \text{ En } x \supset N \exists x \varphi(x)]$ necessary Existence

Ax 3 $P(E)$

Th. $G(x) \supset N(\exists y) G(y)$

hence $(\exists x) G(x) \supset N(\exists y) G(y)$

" $M(\exists x) G(x) \supset MN(\exists y) G(y)$

" $\supset N(\exists y) G(y)$

M = possibility

any two enenough/x are nec. equivalent

exclusive or * and for any number of humanoids

$M(\exists x) G(x)$ means ^{the system of} all pos. prop. is. com-
 putable This is true because of:

At 4: $P(\varphi) \cdot \varphi \supset_N \psi \supset P(\psi)$ which implies

~~then~~ $\begin{cases} x=x & \text{is positive} \\ x \neq x & \text{is negative} \end{cases}$

But if a system S of pos. prop. were inconsistent it would mean that the neg. prop. S (which is positive) would be $x \neq x$

Positive means positive in the modal aesthetic sense (independently of the accidental structure of the world). Only when the act. time is pure. It also means "attribution" as opposed to "privation" (or containing privation). This interprets the neg. part

of φ privation: $(x) N \sim \varphi(x) \equiv \text{Cherchez } \varphi(x) \supset N \neq$

hence $x \neq x$ positive iff $x=x$ neg. verifying At

or the exp. of pos. prop.

x i.e. the formal form in terms of elem. prop. contains a memba without negation.

(C) Computational Metaphysics: Gödel's Manuscript — Inconsistent Axioms

Ontologischer Beweis

Feb. 10, 1970

$P(\varphi)$ φ is positive ($\varphi \in P$)

Ax. 1 $P(\varphi) \cdot P(\psi) \supset P(\varphi \cdot \psi)$

Ax. 2 $P(\varphi) \supset P(\supset \varphi)$

P1 $G(x) \equiv (\varphi) [P(\varphi) \supset \varphi(x)]$ (God)

P2 $\varphi \text{ ess. } x \equiv (\psi) [\psi(x) \supset N(\psi) \supset \varphi(x)]$ (Essence of x)

$P \supset Nq \equiv N(p \supset q)$ Necessity

Ax. 2 $P(\varphi) \supset NP(\varphi)$
 $\sim P(\varphi) \supset N\sim P(\varphi)$

Th. $G(x) \supset G \text{ ess. } x$

Def. $E(x) \equiv (\varphi) [\varphi \text{ ess. } x \supset N\exists x \varphi(x)]$ Necessary Essence

Ax. 3 $P(E)$

Th. $G(x) \supset N(\exists y) G(y)$

hence $(\exists x) G(x) \supset N(\exists y) G(y)$

" $M(\exists x) G(x) \supset MN(\exists y) G(y)$

" $\supset N(\exists y) G(y)$

any two sentences of x are nec. equivalent

exclusive or * and for any number of humanoids

$M(\exists x) G(x)$ means all pos. props. are com-
 putable. This is true because of:

Ax. 4: $P(\varphi) \cdot \varphi \supset_N \psi \supset P(\psi)$ which implies

~~if~~ $\begin{cases} x=x & \text{is positive} \\ x \neq x & \text{is negative} \end{cases}$

But if a system S of pos. props. were inconsistent it would mean that the neg. prop. is (which is positive) would be $x \neq x$

Positive means positive in the modal aesthetic sense (independently of the accidental structure of the world). Only when the ax. are true, it is pure.

Computational Metaphysics — Recent and Ongoing Work —

jww: Ed Zalta (Stanford, US), Dana Scott (Berkeley, US), Bruno Woltzenlogel Paleo (Canberra, Australia), Alex Steen and Max Wisniewski (Berlin), many others

(C) Computational Metaphysics: Lecture Course on Computational Metaphysics

Metaphysics: *Foundational Branch in Philosophy*, that ...

... studies the fundamental nature of **being** and **the world** that encompasses it
... looks **beyond experience** in the real world

Addresses **ultimate questions**, such as:

- What is there?
- What is it like?
- **Is there a God?**
- What can I know?

Method: **Rational Argumentation**

Lecture Course won the 2015 Central Teaching Award of FU Berlin

(jww: Alex Steen, Max Wisniewski, and others)

- ▶ MSc students in Maths, CS, Philosophy and Physics from FU, TU and HU
- ▶ Invited Lectures by Philosophers (Zalta & Lenzen) and Computer Scientists
- ▶ First course of this kind worldwide!

(C) Computational Metaphysics: Principia Metaphysica (Zalta)

—since '83→

NOTE: This is an excerpt from an incomplete draft of the monograph *Principia Logico-Metaphysica*. The monograph currently has four parts:

- Part I: Philosophy
- Part II: Philosophy
- Part III: Metaphilosophy
- Part IV: Technical Appendices, Bibliography, Index

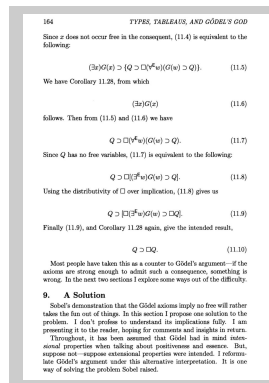

This excerpt was generated on October 18, 2016 and contains:

• Part II:	
Chapter 7: The Language	166
Chapter 8: The Axioms	185
Chapter 9: The Deductive System	203
Chapter 10: Basic Logical Objects	309
Chapter 11: Platonic Forms	354
Chapter 12: Situations, Worlds, and Times	378
Chapter 13: Concepts	438
Chapter 14: Numbers	505
• Part IV:	
Appendix: Proofs of Theorems and Metarules	634
Bibliography	849

Principia Logico-Metaphysica

- ▶ Objective: Formalisation/Automation of Principia Metaphysica
- ▶ Joint work with: Daniel Kirchner (student of mine), Ed Zalta (Stanford)
- ▶ Logics: **Hyper-Intensional Higher-Order Modal Logic**
- ▶ Results:
 - ▶ PLM fully formalised (by Daniel), only minor issues detected
 - ▶ good degree of automation, abstract level theorem prover
- ▶ Sources: <https://github.com/ekpyron/TA0>

(C) Computational Metaphysics: Intensional Version of Ontological Argument

- ▶ Objective: Formalisation/Automation of Fitting's Book
- ▶ Joint work with: David Fuenmayor (student of mine)
- ▶ Logics: Intensional Higher-Order Modal Logic
- ▶ Results:
 - ▶ essential parts are formalised (by David), only minor issues detected so far
 - ▶ good degree of automation
- ▶ Sources: <https://github.com/cbenzmueLLer/TypesTableauxAndGoedelsGod>

(C) Computational Metaphysics: Provability Logic

- ▶ Objective: Formalisation/Automation of Boolos' Book
- ▶ Joint work with: David Streit (student of mine)
- ▶ Logics: Provability Logic
- ▶ Results:
 - ▶ essential parts are already formalised, no issues detected so far
 - ▶ good degree of automation
- ▶ Sources: will-soon-be-made-public

Conclusion

- ▶ Formal Proofs Increasingly Relevant in Maths, CS and Beyond
- ▶ Significant Improvements in Interactive and Automated Theorem Proving
- ▶ Universal Logic Reasoning in HOL via Shallow Semantic Embeddings
- ▶ **Deep Analysis of Rational Arguments on the Computer**
 - ▶ significant contribution towards a **Computational Metaphysics**
 - ▶ even **novel results** contributed by **theorem provers**
 - ▶ related work: only for Anselm's simpler argument
 - ▶ first-order ATP PROVER9 [OppenheimerZalta, 2011]
 - ▶ interactive proof assistant PVS [Rushby, 2013]
 - ▶ **approach works well in practice**: matches granularity of human arguments
 - ▶ **approach can be adapted** for other logics and logic combinations

Outlook: Many relevant other applications (but I need resources!)

- ▶ Maths, Computer Science, Artificial Intelligence
- ▶ Philosophy, Natural Language Processing
- ▶ Legal-, Ethical- and Moral-Reasoning in Intelligent Machines
- ▶ Rational Argumentation in general
